

**FOR IMMEDIATE RELEASE**

LOS ANGELES, CA – September 8, 2025

**StorageChain LLC Appoints Industry Veteran Lisa Riordan as Director of Enterprise Accounts for Document Management Division**

**Los Angeles, CA** – StorageChain LLC, a pioneer in secure storage solutions, today announced the appointment of **Lisa Riordan** as its new **Director of Enterprise Accounts** for the company’s rapidly expanding **Document Management Division**.

Riordan brings over **20 years of experience in the information management industry**, including leadership roles at both **Iron Mountain** and **Access**, two of the largest and most respected names in records and document management.

While at Iron Mountain, Riordan managed a portfolio of **20 enterprise customers**, consistently exceeded sales targets, and played a key role in **training sales representatives and account managers** across all divisions and business lines. At Access, she managed more than **20 enterprise accounts**, driving growth of over **25% year-over-year**. Her proven record of success positions her perfectly to lead StorageChain’s enterprise client strategy as the company scales its Web2 document management services alongside its Web3 decentralized storage platform.

“StorageChain is at an exciting inflection point,” said **Chris Dominguez, CEO of StorageChain LLC**. “With our proven blockchain-based decentralized storage network and our new document management division, we are uniquely positioned to serve both traditional and next-generation markets. Lisa’s expertise, credibility, and client-first approach will be critical in helping us expand our footprint with enterprise customers.”

StorageChain’s near-term plan focuses on **building out the Southern California market**, with an expansion strategy to **replicate its document management services in other states such as Texas** and beyond. The company sees a **huge opportunity** where document management serves as the **front-end on-ramp** for enterprise customers, seamlessly connecting into StorageChain’s **back-end decentralized storage platform**.

As part of this strategy, StorageChain will also become the **first company in the world to “AI enable” customer paper archives with scan-to-vector storage capabilities**. This breakthrough technology transforms static paper archives into **searchable, intelligent data objects**, unlocking entirely new value for organizations that have long struggled to access insights from decades of records.

“I am thrilled to join StorageChain at this pivotal time,” said **Lisa Riordan**. “For decades, organizations have struggled with managing massive volumes of paper records and digital files. StorageChain’s dual approach — combining best-in-class document management services with the innovation of decentralized blockchain storage and AI-enabled archives is exactly what the

industry has been waiting for. I look forward to helping StorageChain bring these solutions to enterprise customers across Southern California and beyond.”

**About StorageChain LLC**

StorageChain LLC is a leader in secure storage innovation, offering traditional document management and scanning services alongside a groundbreaking Web3 decentralized storage network. The company helps businesses of all sizes digitize, organize, and safeguard their most critical information.
